SAFETY INSTRUCTIONS

The following is required by the roughly 9,542 government agencies and regulations we have to comply with. If you have some common sense, they should seem pretty straightforward. In any case, read these instructions before proceeding farther, follow all instructions, and heed all warnings. Or else!

1. If you don't know how to install audio devices, get a qualified professional to help.
2. Never use this device near water, and clean only with a dry cloth.
3. Assure adequate ventilation, do not block any ventilation openings, or place near heat sources.
4. Use only the supplied power cord or suitable replacement. Route cords away from traffic areas and protect them from being pinched. Unplug the cord from the outlet if the apparatus is unused for a long period of time.
5. To prevent electric shock, do not use the plug with an extension cord, receptacle, or outlet unless blades can be fully inserted.
6. Refer all servicing to qualified service personnel. Service is required when the device has been damaged, including cord or plug damage, liquid has been spilled or objects have fallen into the device, the device has been exposed to rain or moisture, does not operate normally, or has been dropped.

WARNING: TO REDUCE THE RISK OF FIRE OR ELECTRIC SHOCK, DO NOT EXPOSE THIS DEVICE TO RAIN OR MOISTURE.

Application for Council Directives 72/23/EEC
Conformity declared for EN60065, EN50082-1

WELCOME TO ASGARD!

In Norse mythology, Asgard was the city of the gods. So, yeah, a pretty cool place to be. And a very nice place for your headphones.

Asgard helps hard-to-drive headphones sound their best when used with today's, ah . . . rather wimpy audio devices. We're looking at you, iPod. And you, computer. Even your audiophile CD player typically isn't up to giving your headphones their best workout.

Asgard delivers up to 20V p-p—which, in English, translates to “holy moly, my ears just exploded!”

But that doesn't mean Asgard is only for death metal. Asgard's single-ended, class-A, zero feedback, all-discrete, single voltage gain stage topology is one of the cleanest you'll find in any headphone amplifier. This means rich, pure, expansive sound.

We hope you enjoy your time in Asgard!

IN THE BOX

ONE

Asgard headphone amplifier

ONE

Power cord
(for, like, well duh)

FOUR

Stick-on feet
(for the bottom or side
of your Asgard)

FRONT PANEL

1 Volume Knob. It works exactly like you'd expect. Turn it to the right to make the music louder. Stop before smoke comes out of your headphones.

2 Power On LED. When this is lit, the power is on. When it's not lit ... well, you get the picture here.

3 Headphone Jack. This is where your headphones plug in. It is very difficult to get satisfactory results without headphones. A relay mutes the output for 10 seconds after turn-on, and immediately after turn-off.

4 Vent Holes. This may look like a great place to keep your coffee warm, but don't. And **DO NOT BLOCK ANY OF THE VENT HOLES.** If you do, the Norse gods will appear and rip your face off. Well, maybe not.

BACK PANEL

1 RCA Inputs. This is where you connect your MP3 player, CD player, DAC, or music server. It uses standard RCA cables. And yes, you can use a fancy audiophile cable if you want.

2 On-Off Switch. Up is on. Down is off. Pretty easy. You can turn the amp on and off between uses, or leave it on all the time (though it's a real deskwarmer if you do.) We recommend you turn it off if you aren't going to be listening for a few hours.

3 AC Input. Plug the power cord in here. Plug the other end into a wall outlet of the correct voltage. Trying to run a 115V unit on 230V will result in a blown fuse, no music, and a void warranty.

4 Disclaimer. No, seriously. Don't take this apart. Don't stick paperclips through the holes on the top or side. Do not randomly loosen screws. Bad things will happen. And again, you'll void your warranty.

FAQ

I hear hum through the headphones, what do I do?

You may have a ground loop. To fix a ground loop, try a GFCI outlet or a ground loop isolator.

My Asgard runs hot, is this normal?

Yep. Check the front of this owner's manual.

No, it's really hot!

Yes, we know. That's how it's supposed to run. Don't put it on your lap or anything. Oh, and don't block the vents on the side or top and don't put it on top of any other warm equipment.

It doesn't turn on, what do I do?

Plug it in to a different AC socket. Ensure you are not currently in a blackout. Then call us if it still doesn't turn on.

Can I stand it on end so it takes up less desk space?

You bet! We've provided the feet separately so you can do exactly that. We strongly recommend you run it with the volume knob and headphone jack down, for best heat transfer.
